I've compiled a list of all the remaining changes to be made for our HIMSS project. There are a few modifications, both cosmetic and technical, that I've outlined below in order of importance. Please review and let me know if you have any questions. I'm excited to discuss this further in our meeting tomorrow.

Additions

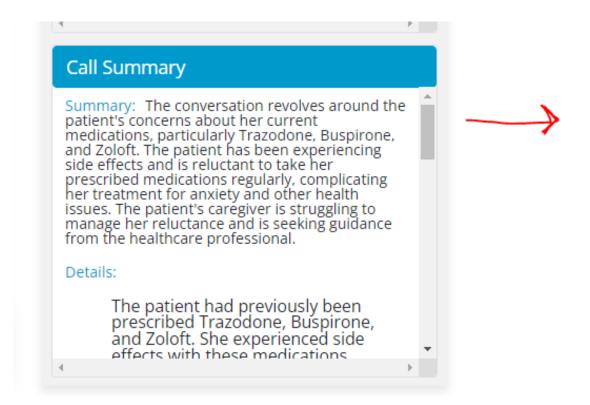

- Add a disclaimer at the top of the page (between the LBMC logo and "Chatbot Interface") that says: "No Patient identifiable information is included in this demo". This must be abundantly clear, as noted by one of our managers.
- 2. Introduce expandable/collapsible functionality for the sections: Patient Info, Vital Info, Patient Conditions, and Call Summary.
- 3. Incorporate a "Patient Conditions" section to display each condition, its diagnosis date, and the current treatment status.

Cosmetic Updates:

 Please widen the chat window to ensure chat responses aren't too elongated. Consider expanding both the overall window and the internal chat frame. Please refer to the screenshot below:

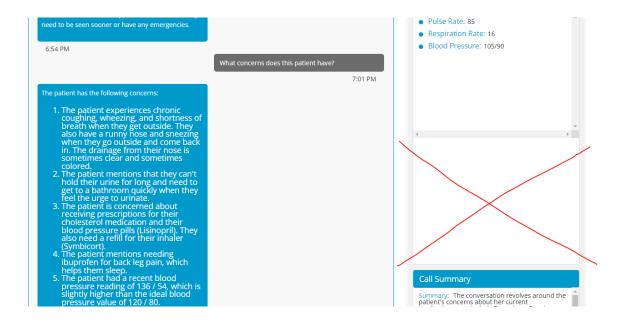

2. Adjust the side pane to be slightly broader for better readability of the Call Summary.

3. Remove unnecessary scroll bars where applicable:

4. Lock the side pane in its position to prevent it from expanding along with the chat window:

Technical Updates:

- 1. The current HTTP request seems hardcoded with "P001". Ensure that the function calls the appropriate patient ID based on filter selection and the selected dates.
- 2. Address the date filter reset bug. Currently, when selecting a new patient, the date remains unchanged from the previous patient, even if it does not apply to the new one.
